InForm

Sketching Report

01 Value Propositions

Overview

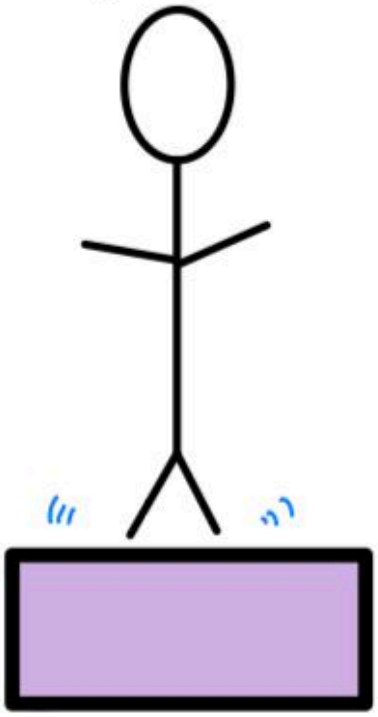
InForm helps self-conscious gym-goers improve lifting form through subtle, real-time haptic feedback that does not draw attention or interrupt workout flow.

Team Members

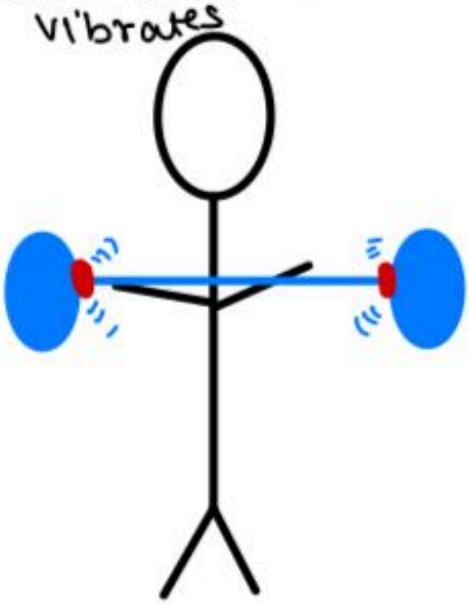
Kenisha Vaswani, Jenil Prajapati, Animesh Sachan

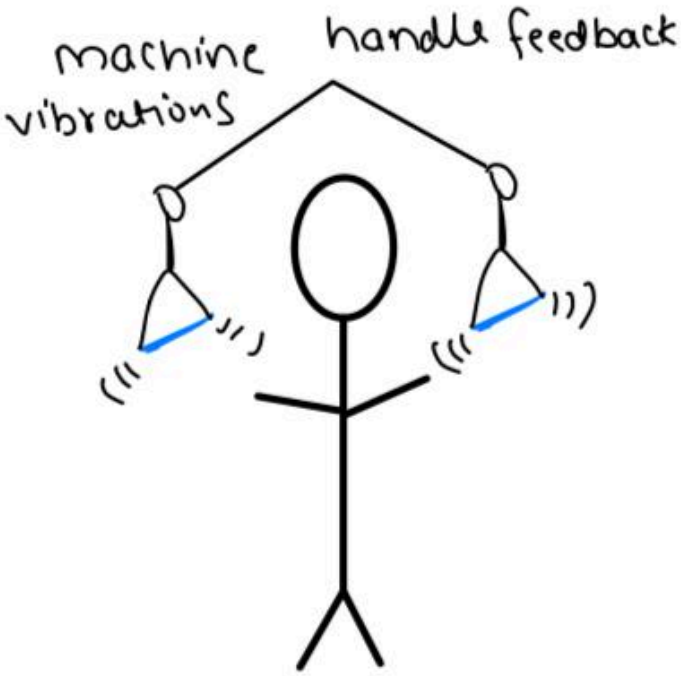
02 Brainstorm Solutions

Smart mat sensing stance

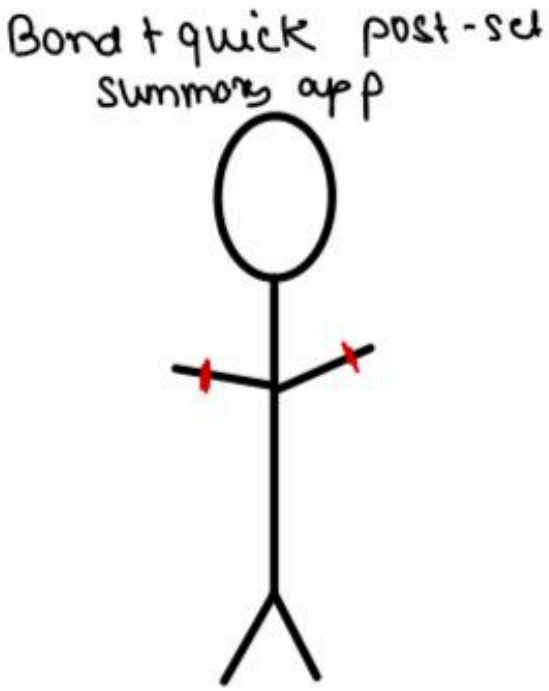


Barbell collor that vibrates



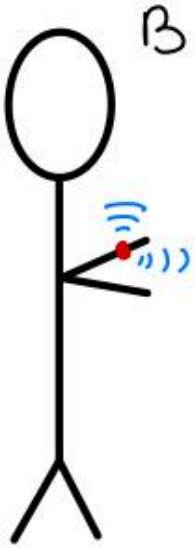


machine vibrations
handle feedback

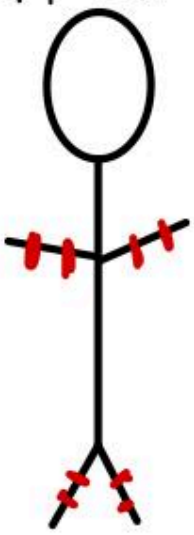


Bond + quick post-set summary app

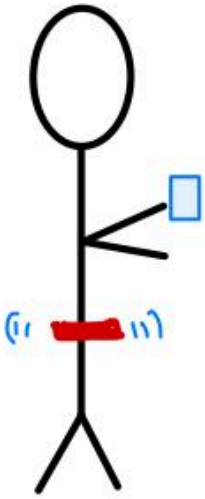
Single wrist Band



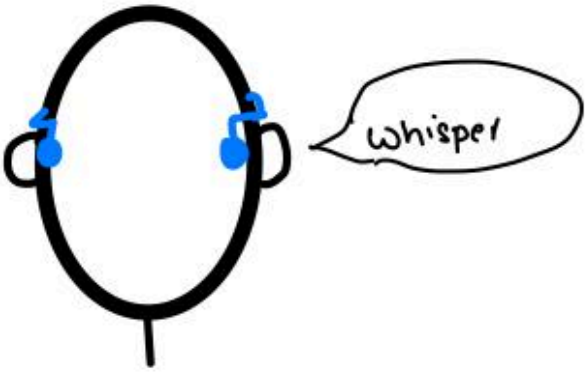
Multi-Points Bands + APP SUMMARY



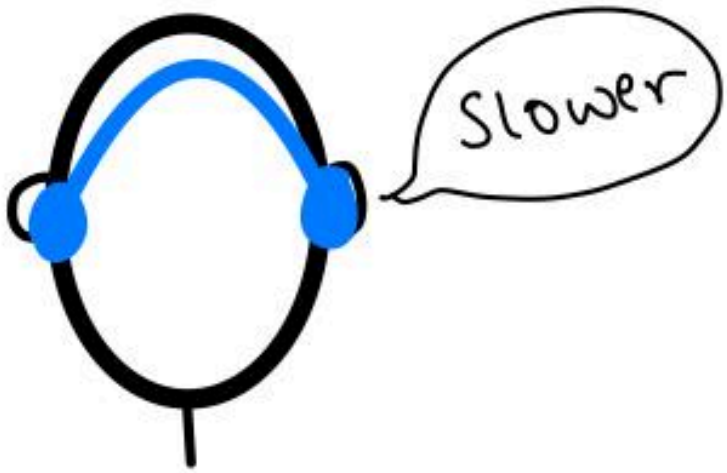
Smart lifting Belt



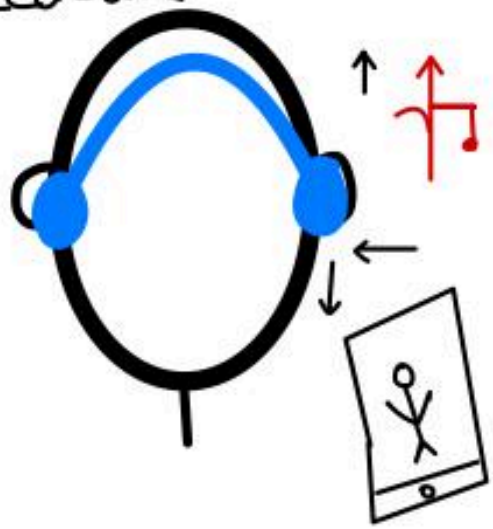
Bone Conduction



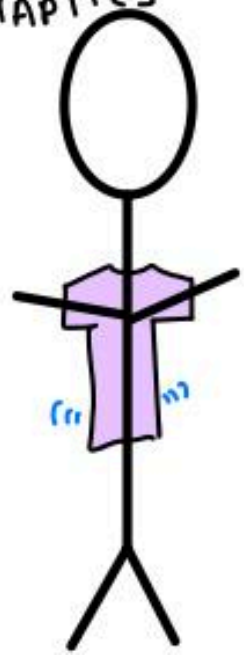
one word audio cues



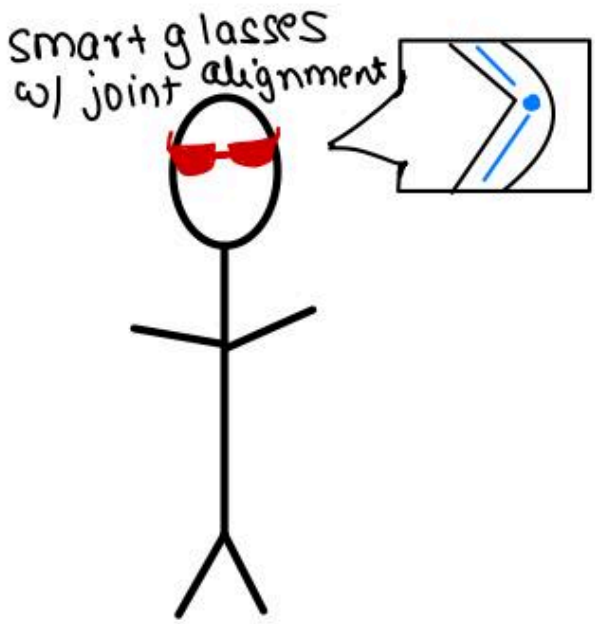
Tone - based feedback



COMPRESSION SHIRTS
W/ HAPTICS

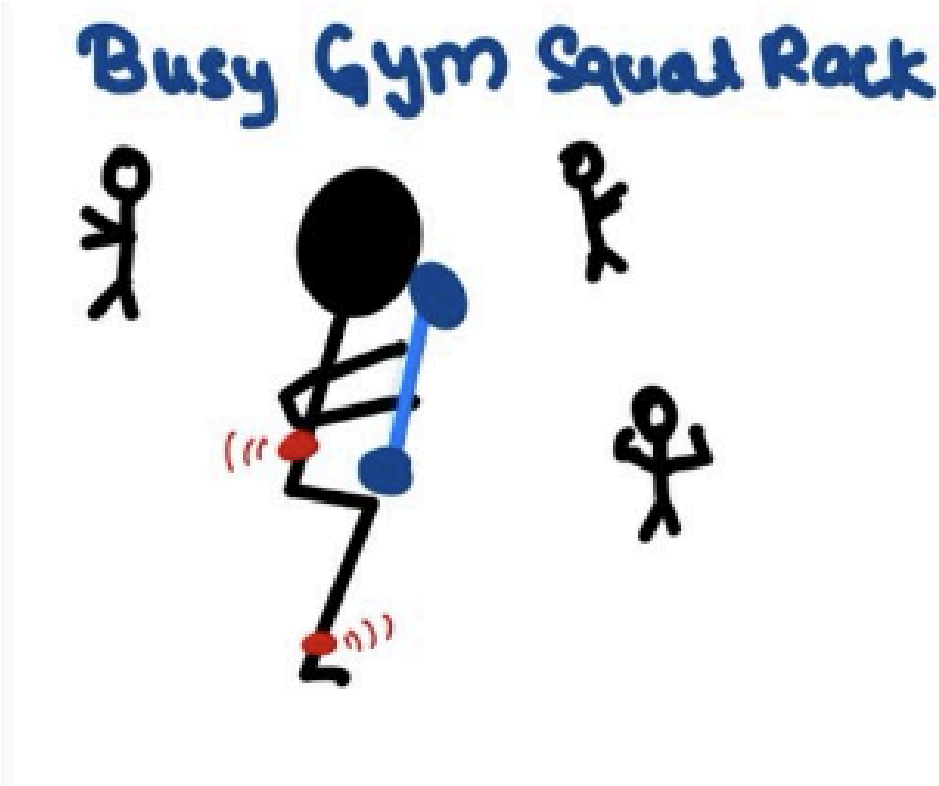


Gloves that Buzz
when form off

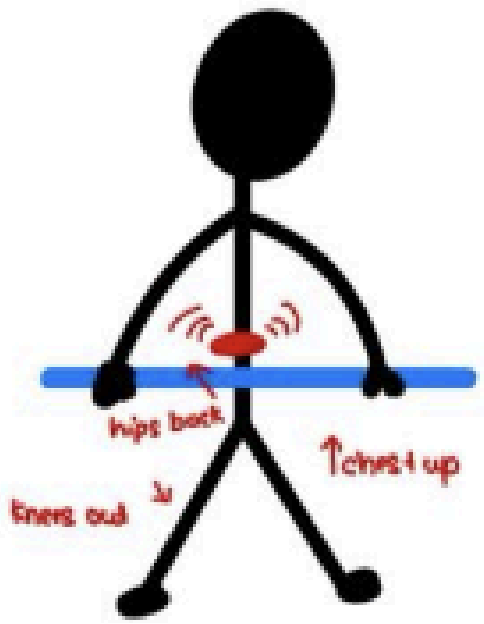


03 Concept Sketches

HAPTIC WEARABLE SYSTEM

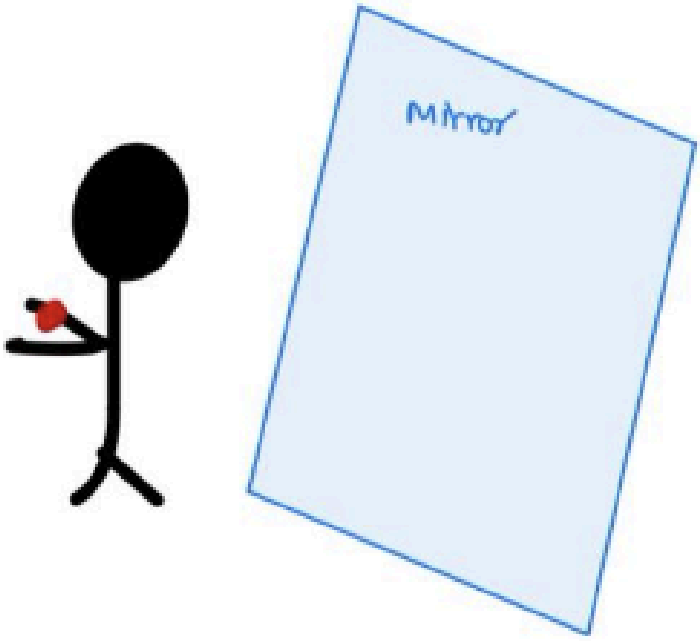


Lower-back tracker detects rounding → gives 2 short pulses.
User corrects immediately without looking at a screen.
Feedback stays private and invisible to others.



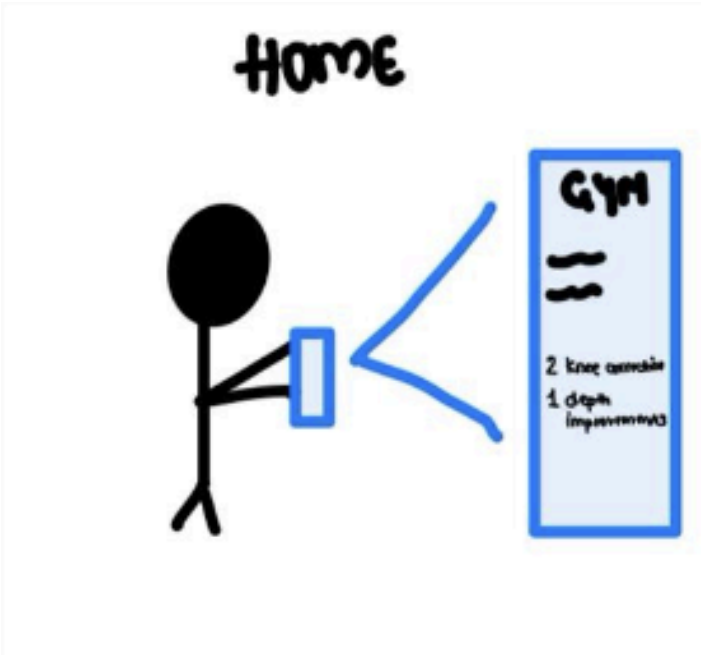
DEADLIFT DIRECTIONAL CUES

Localized vibration shows *where* the issue is.
Reduces thinking mid-lift.
User stays focused on movement, not tech.



MIRROR AVOIDANCE

Supports users who avoid mirrors/filming due to self-consciousness
Feedback comes from the body, not reflection.



POST SET SUMMARY
Feedback only between sets to preserve flow
Uses supportive language.

AUDIO COACH

ONE WORD CUE, MID REP

One-word cue reduces cognitive load.
Only user hears it

BETWEEN SET COACHING

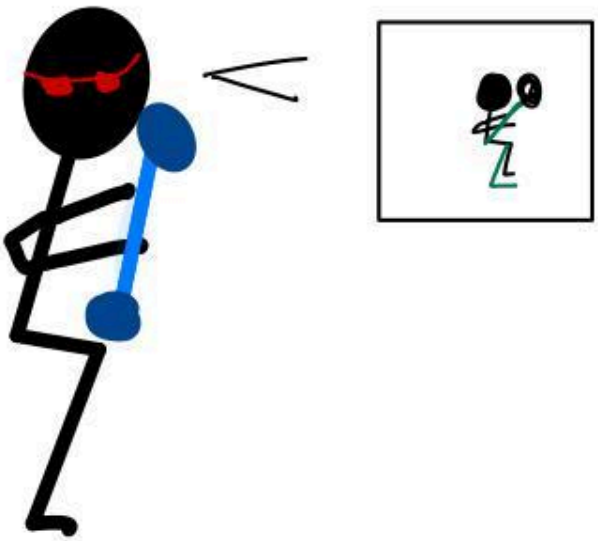
Timing cues between sets avoids interrupting reps.

NOISY GYM MODE
Tone patterns replace speech in noisy settings.

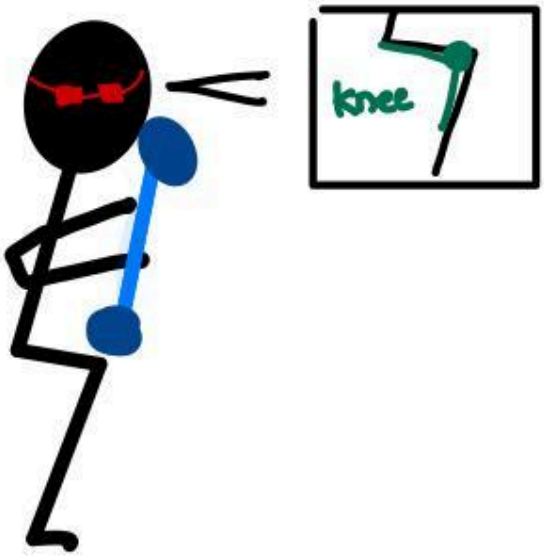
REASSURANCE FOR ANXIOUS GYM GOERS

Addresses fear of judgment & anxiety
Supportive, not evaluative.

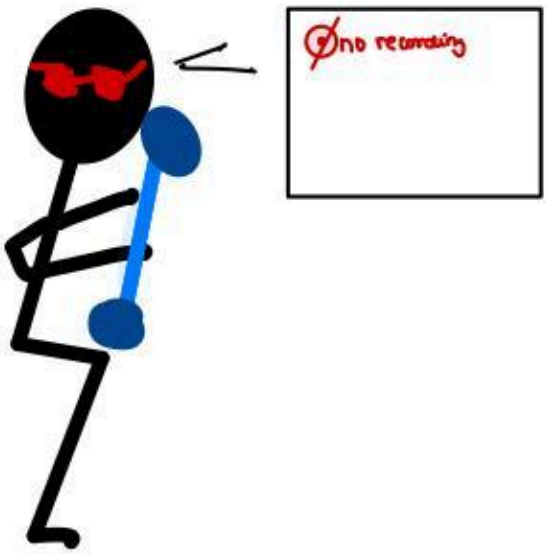
AR GLASSES



SQUAT OUTLINE
Shows target posture without filming.
Private visual guidance.



KNEE ZOOMED IN
Focuses attention on one join to avoid overload.



PRIVACY INDICATORS

Builds trust in shared gym spaces.

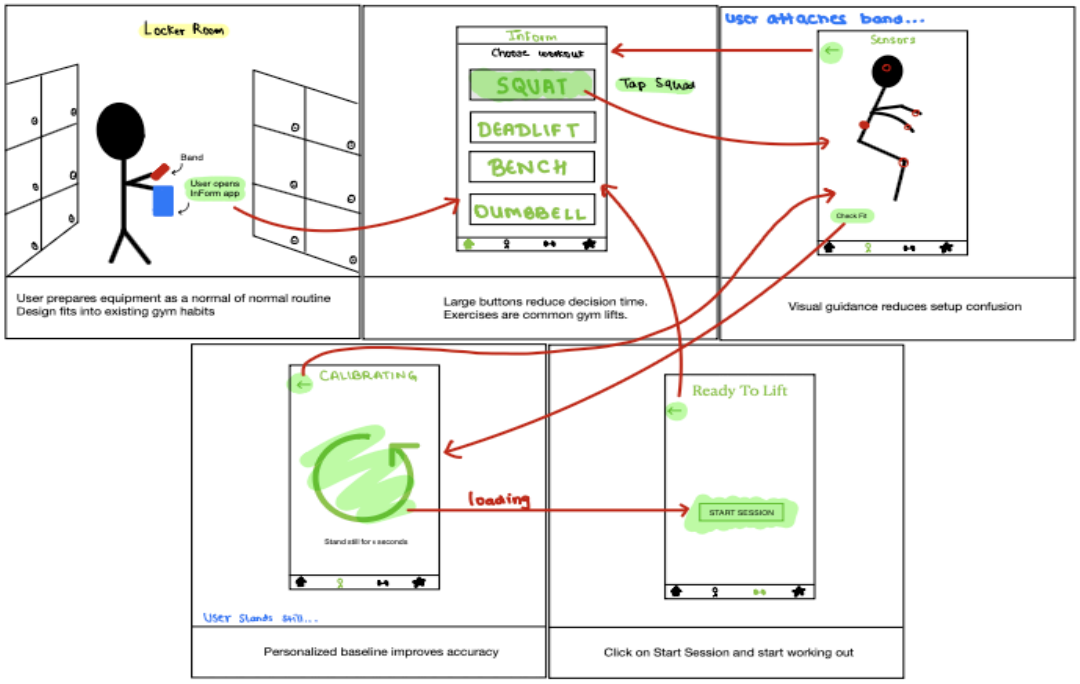
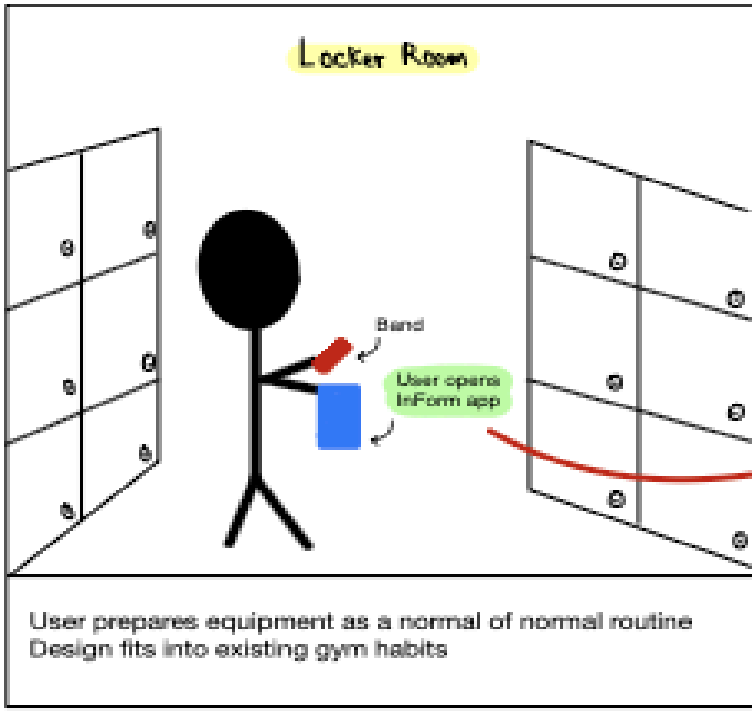
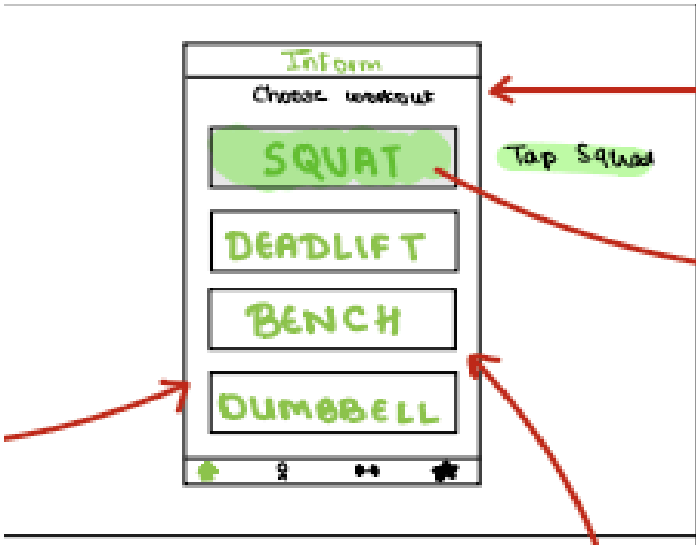
06 TASK FLOWS

SIMPLE TASK FLOW: Calibrate and correctly wear the InForm band before beginning exercise.

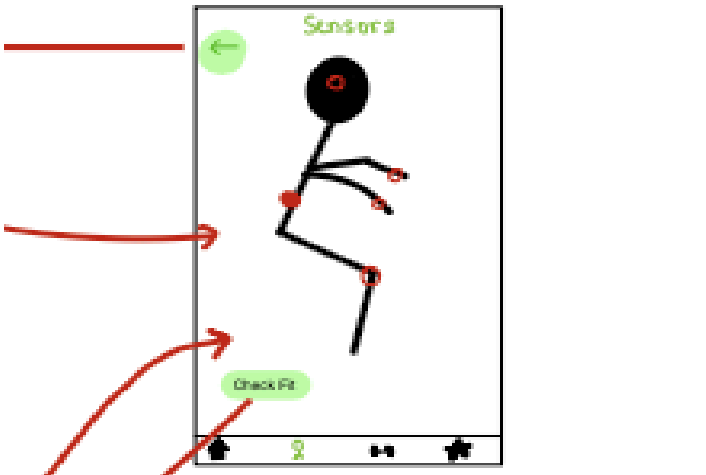




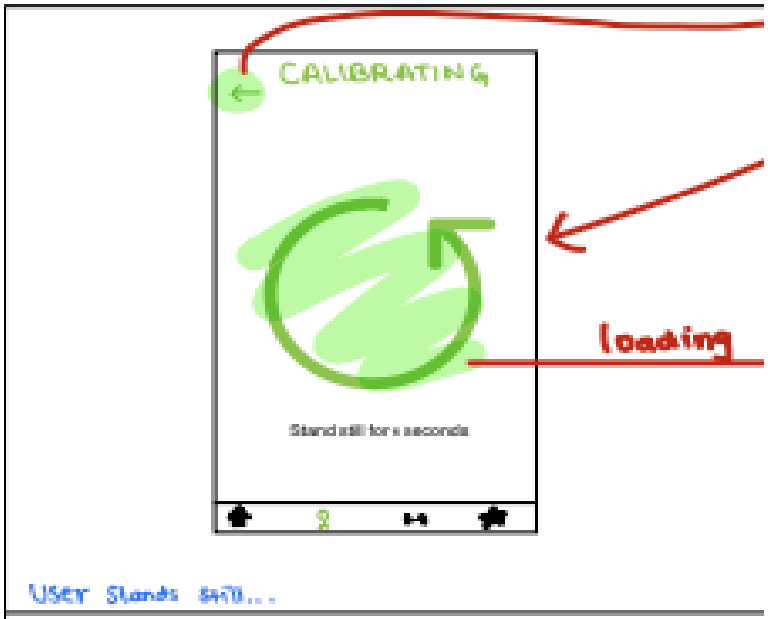


Large buttons reduce decision time.
Exercises are common gym lifts.

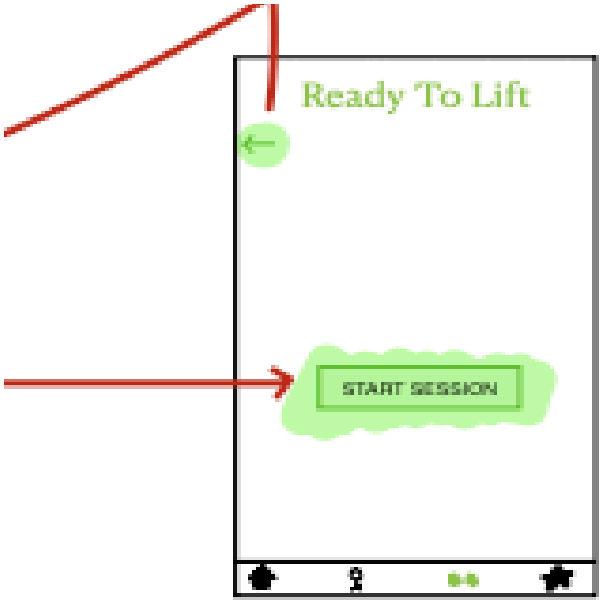
User attaches band...



Visual guidance reduces setup confusion

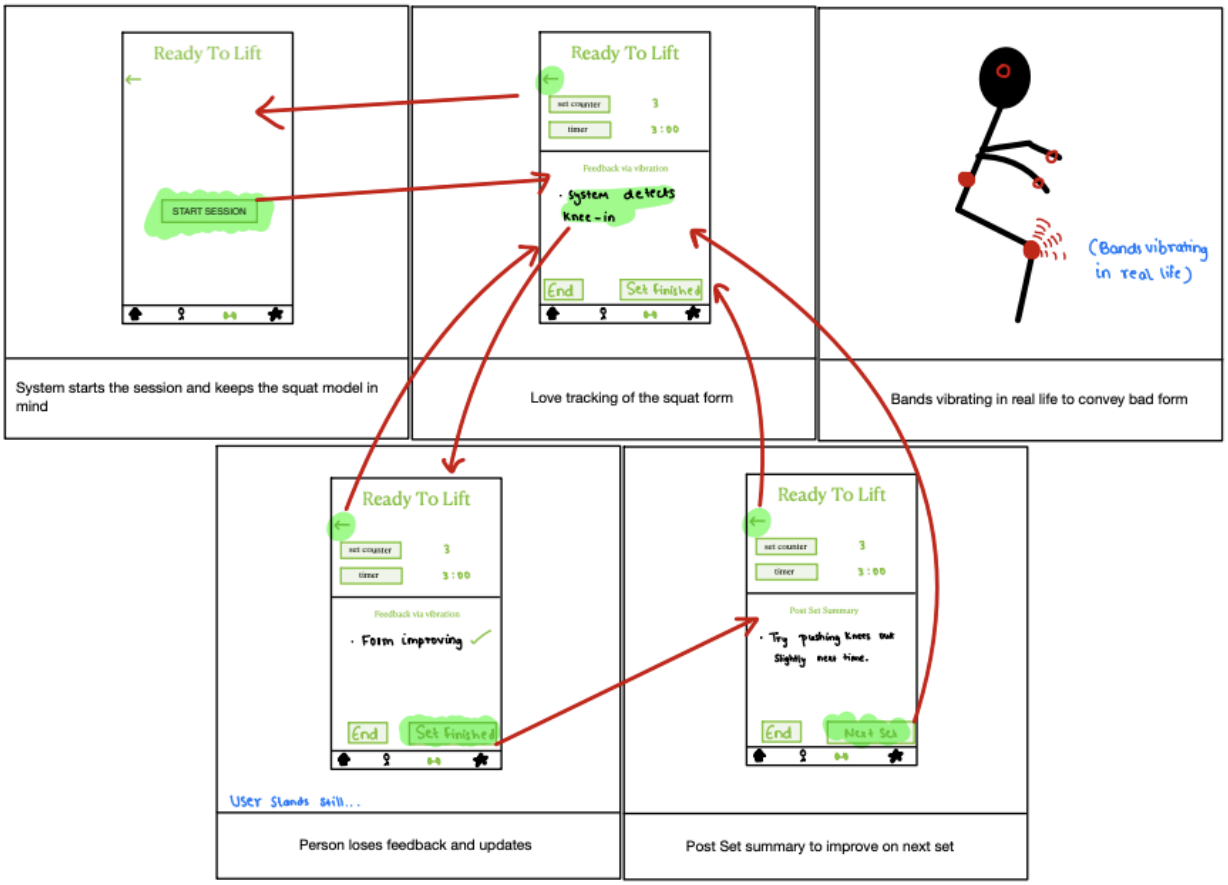


Personalized baseline improves accuracy



Click on Start Session and start working out

MODERATE TASK FLOW: Respond to vibration feedback and correct posture during exercise.



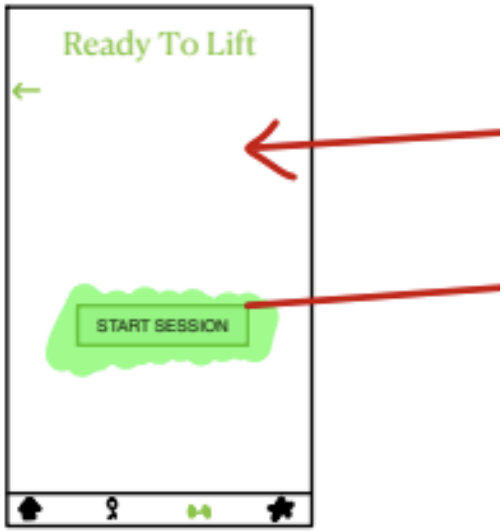
System starts the session and keeps the squat model in mind

Love tracking of the squat form

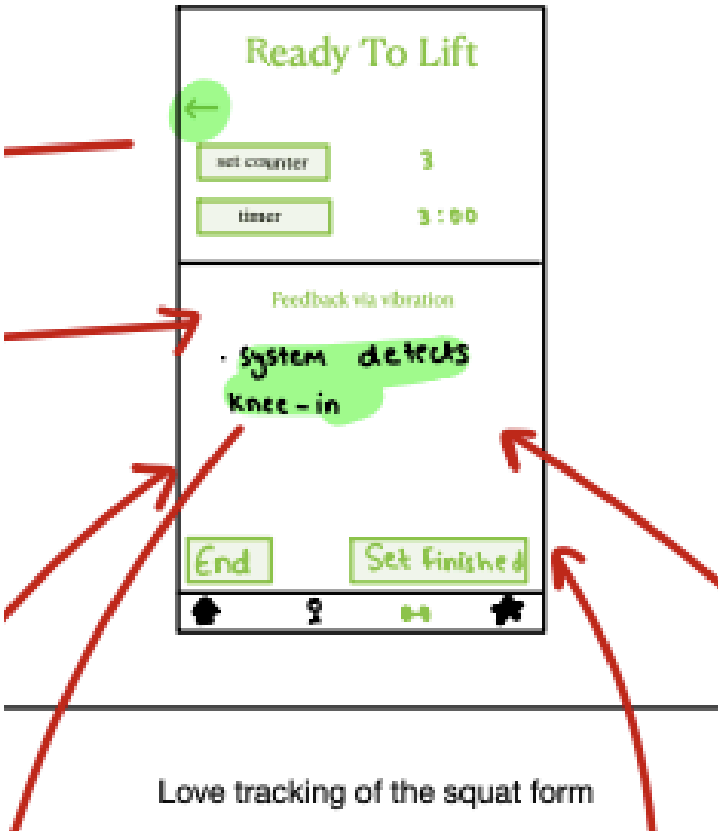
Bands vibrating in real life to convey bad form

Person loses feedback and updates

Post Set summary to improve on next set



System starts the session and keeps the squat model in mind



Love tracking of the squat form

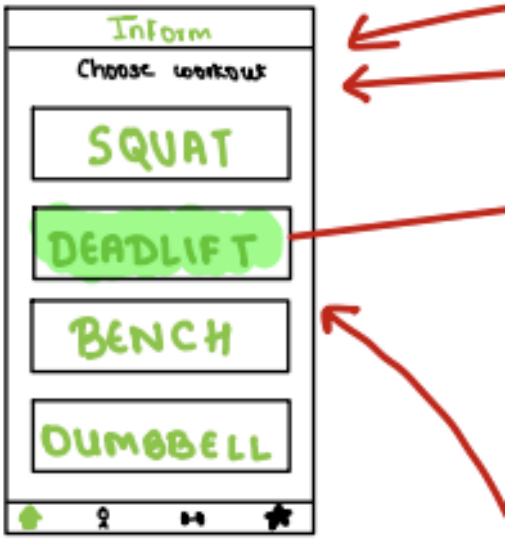
Bands vibrating in real life to convey bad form

User stands still...

Person loses feedback and updates

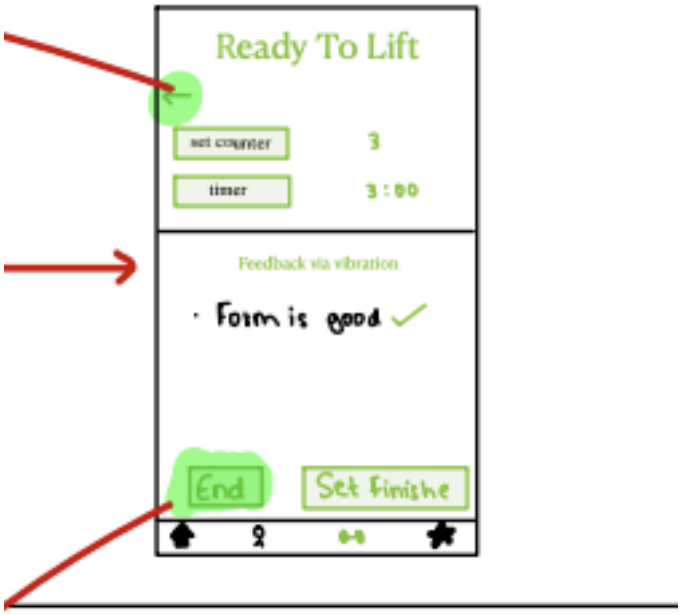
Post Set summary to improve on next set

COMPLEX TASK FLOW: Apply learned corrections across a new exercise with reduced feedback.



System loads deadlift tracking model

Recalibrates before starting workout



Live updates from the bands through vibrations

Post workout summary after the workout ends
